3D GRAND PRIX

Features

3D Grand Prix for the Amstrad Computers has the most exciting graphics we have ever seen on the Amstrad Computers. 3D Grand Prix allows you to sit in the driving seat of one of the fastest formular 1 racing cars in the circuit, and with the use of either the keyboard or the joystick you will be able to exercise your skills to race round 8 international Grand Prix circuits, and all from the safety and comfort of your armchair. The cockpit will display full driving information including rev counter, temperature gauge, speed and gear selector. Full use of your wing mirrors will be required to notify you of other car actions behind you. Infact all of your driving skills will be required to enable you to finish each course in one of the first 3 positions, thus enabling you to continue to the next circuit.

The game features other cars that will overtake you and sometimes crash into you. So your front road wheels steer left and right as you negotiate the 3 dimensional bends, testing your driving skills to the limit. Also included are starting lights, sign posts, checkered flag, full rolling scenery, stimulating sound effects, score and high score features. 3D Grand Prix is available both on disc and cassette.

Could you drive anything less?
